

All critical information known about an individual, in one place

Sentinel's Single View Portal is the core building block for so many other Sentinel Portal Applications, but in itself, this represents a huge breakthrough for our clients. A single, most complete and most trusted version of the truth from all of their fragmented sources of data

Based on the Sentinel Data Integration Platform, all available information is collected, validated, cleansed and matched together to produce a complete and holistic data set for each child. From this, any number of different 'Single View of a Child' Portals can be configured, to enable controlled data sharing across any team and any partner.

Key features and benefits include:

- > **Tailored access:** Specifically designed and configured in collaboration with our clients to ensure each Portal only includes the information it should, and all end users can only see what they need to see
- > **Dashboards:** Specifically designed and configured to display all critical target lists of children with particular needs or in particular situations, or at particular risk
- > **Data Profiling:** Create automated profiling rules to monitor for specific events or trigger points
- > **Automated alerts:** Setup on-screen / email / SMS alerts based on the profiling rules to provide real-time updates to practitioners, and trigger appropriate services
- > **Chronology:** Build up a history of events and interventions to understand trend and progress
- > **Collect new data:** Include data collection forms on the Portals allowing users to add new information from their interviews and interactions with the child and those around them
- > **Highly secure:** Created in accordance with Data Protection by Design principles and compliant with our Cyber Essential Plus and ISO27001 standards; all data is encrypted, all access points have strong cyber defences and resilience, user access requires dual-factor authentication and there is a full audit trail of user activity
